

E-Commerce Sales & Customer Funnel Analysis Dashboard Report

This report presents an analysis of e-commerce sales and customer funnel performance using an interactive Power BI dashboard. The project focuses on understanding customer behavior, purchase trends, category performance, and overall business insights.

Project Objectives

- Analyze total sales performance and purchase behavior.
- Track customer journey through funnel stages.
- Identify top-performing product categories and brands.
- Monitor user sessions and engagement trends.
- Support data-driven business decision making.

Tools & Technologies Used

Technology	Purpose
Power BI	Dashboard Development & Visualization
Python	Data Cleaning & Preprocessing
Pandas	Data Manipulation
NumPy	Numerical Operations
Matplotlib	Data Visualization
Jupyter Notebook	Exploratory Data Analysis

Dashboard Preview

E-Commerce Sales & Customer Funnel Analysis

Dashboard Features

- KPI Cards showing Total Sales, Purchases, and Total Users.
- Customer Funnel Analysis to monitor conversion stages.
- Category-wise Sales Breakdown.
- Brand Performance Scatter Plot.
- Weekday Purchase Trend Analysis.
- Monthly User Session Tracking.
- Interactive Filters for dynamic reporting.

Key Insights

- Electronics generated the highest sales revenue.
- Purchases were highest during Tuesdays and Fridays.
- Strong customer conversion observed from sessions to purchases.
- Some brands achieved higher sales despite moderate pricing.
- Monthly sessions showed slight fluctuations over time.

Conclusion

The E-Commerce Sales & Customer Funnel Analysis Dashboard provides valuable business insights through interactive visualizations and analytics. This project demonstrates practical skills in business intelligence, dashboard design, data cleaning, and customer behavior analysis.
