

# Sales Analysis Report

A Simple Guide to Our Business Performance

Date: May 2026

---

# 1. What the Numbers Tell Us

---

We looked at 10,000 different events from our online store to see how we are doing. Here are the most important things we found in plain English:

## Most People Who Visit, Buy Something

Out of every 100 people who visit the store, about 89 of them end up buying a product. This is a very good sign! It means people like what they see and find it easy to shop.

## Electronics are the Top Sellers

Our "Electronics" section brings in the most money. However, there is a big problem: a lot of our items are marked as "Unknown." This means we don't know exactly what category they belong to, which makes it hard to plan for the future.

**Important Note:** We made 2.87 Million dollars in total sales from 10,000 purchases.

# 2. When Do People Shop?

---

By looking at the charts, we noticed some clear patterns in **when** our customers like to spend money:

- **Best Days:** Tuesday and Friday are our busiest days. This is when we see the most sales.
- **Slow Times:** We noticed that fewer people visited the store in the second month compared to the first. We need to find a way to bring those people back.
- **Price Points:** Most of our customers prefer buying items that cost less than \$500. We don't sell many items that cost more than \$1,000.

# 3. Simple Steps to Grow Our Sales

---

Based on the dashboard we built, here are three simple things we should do next:

| What to do                     | Why it helps                                                                                                                    |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Fix Item Categories</b>     | We need to stop using the "Unknown" label so we know exactly what is selling best.                                              |
| <b>Tuesday/Friday Deals</b>    | Since people already shop on these days, giving them a small discount or a "deal of the day" will encourage them to spend more. |
| <b>Bring Back Old Visitors</b> | Since visits dropped recently, we should send an email or a reminder to people who haven't visited in a few weeks.              |

## Looking Ahead

Our dashboard is a great start. In the next version, we want to make it even better by adding a "Predictor" tool. This will help us guess how many sales we will have next month so we can be prepared.

Overall, the business is strong, and by fixing a few small things—like how we label our products—we can make even more money.
